

## Course One

### Foundations of Data Science

#### Instructions

Use this PACE strategy document to record decisions and reflections as you work through this end-of-course project. You can use this document as a guide to consider your responses and reflections at different stages of the data analytical process. Additionally, the PACE strategy documents can be used as a resource when working on future projects.

#### Course Project Recap

Regardless of which track you have chosen to complete, your goals for this project are:

- Complete the PACE Strategy Document to plan your project while considering your audience members, teammates, key milestones, and overall project goal.
- Create a project proposal for the data team.

#### Relevant Interview Questions

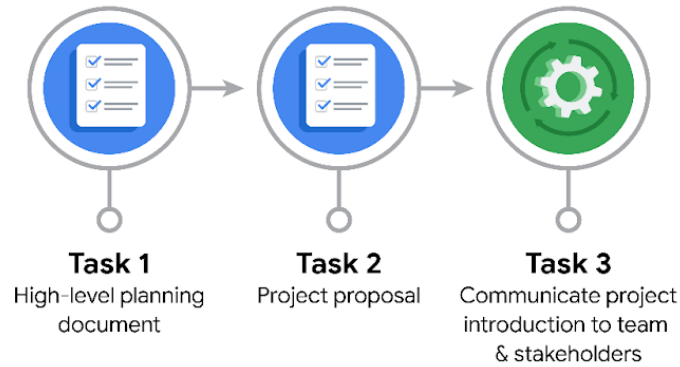

Completing this end-of-course project will empower you to respond to the following interview topics:

- As a new member of a data analytics team, what steps could you take to get 'up to speed' with a current project? What steps would you take? Who would you like to meet with?
- How would you plan an analytics project?
- What steps would you take to translate a business question to an analytical solution?
- Why is actively managing data an important part of a data analytics team's responsibilities?
- What are some considerations you might need to be mindful of when reporting results?

## Reference Guide

This project has three tasks; the following visual identifies how the stages of PACE are incorporated across those tasks.

## Data Project Questions & Considerations

### PACE: Plan Stage

- Who is your audience for this project?

- TikTok Team

- What are you trying to solve or accomplish? And, what do you anticipate the impact of this work will be on the larger needs of the client?

- Aim to develop a predictive model that can determine whether a video contains a claim or offers an opinion to reduce the backlog of user reports and prioritize them more efficiently.

- What questions need to be asked or answered?

- What is the condition of the dataset?  
 - What can we do to reduce bias?  
 - What are the key variables in the dataset?  
 - What is the confidence rate or the accuracy percentage of our model?

- What resources are required to complete this project?

- TikTok's data
- Python
- Stakeholder's input.

- What are the deliverables that will need to be created over the course of this project?

- Project Proposal
- EDA report
- ML and statistical model

## THE PACE WORKFLOW

**[Alt-text: The PACE Workflow with the four stages in a circle: plan, analyze, construct, and execute.]**

You have been asked to demonstrate for the company's data team how you would use the PACE workflow to organize and classify tasks for the upcoming project. Select a PACE stage from the dropdown buttons. A few tasks involve more than one stage of the PACE workflow. Additionally, not every workplace scenario will require every task. Refer back to the Course 1 end-of-course portfolio project overview reading if you need more information about the tasks within the project.

## Project tasks

Following are a group of tasks your company's data team has determined need to be completed within this project. The data analysis manager has asked you to organize these tasks in preparation for the project proposal document. First, identify which stage of the PACE workflow each task would best fit under using the drop down menu. Next, give an explanation of why you selected the stage for each task. Review the following readings to help guide your selections and

explanation: [The PACE stages](#) and [Communicate objectives with a project proposal](#). You will later reorder these tasks within a project proposal.

**1. Evaluating the model: Execute**

Why did you select this stage for this task?

After the completion of the model, we need to execute the model for its accuracy and it is done in the execute phase.

**2. Conduct hypothesis testing: Analyze and Construct**

Why did you select these stages for this task?

The determination of the test is done in the analyze phase and the test is carried out in the construct phase.

**3. Begin exploring the data: Analyze**

Why did you select this stage for this task?

Data exploration takes place in the analyze phase.

**4. Data exploration and cleaning: Plan and Analyze**

Why did you select these stages for this task?

Planning takes place when you first make choices about the methods needed. The cleaning process then takes place in the analyzing stage.

**5. Establish structure for project workflow (PACE): Plan**

Why did you select this stage for this task?

The structure of the project is defined in the initial stage.

**6. Communicate final insights with stakeholders: Execute**

Why did you select this stage for this task?

After the completion of the project, final insights are shared with stakeholders in the execute phase of the data project workflow.

**7. Compute descriptive statistics: Analyze**

Why did you select this stage for this task?

Investigating the statistics within data takes place during analysis.

**8. Visualization building: Analyze and Construct**

Why did you select these stages for this task?

Visualization begins with data assessment and is created during the construction stage.

**9. Write a project proposal: Plan**

Why did you select this stage for this task?

A project proposal is the initial document used to define a project, it is created after the PACE document in the plan phase.

**10. Build a regression model: Construct and Analyze**

Why did you select this stage for this task?

During the analyzing stage, the model is examined in detail to be sure it will meet the needs of the task. The building of the regression model will take place in the construction phase.

**11. Compile summary information about the data: Analyze**

Why did you select this stage for this task?

Inspecting a dataset to compile information would take place in the analysis phase.

**12. Build machine learning model: Construct**

Why did you select this stage for this task?

The building of a data model takes place in the construct stage.
